## Multifunctional systems

### Heat pumps

Electrolux high-efficiency household heat pumps can become the optimal solution for the organization of heating and air conditioning systems for various purposes.

Heat pumps have combined the most complete set of functions, energy-saving technologies and a well-thought-out control interface.

**Working on the principle of a heat pump, models of this series consume less than 170 watts of electricity for each kW of heat, which is 6 times more efficient than household electric heaters.**

Electrolux HVI air conditioners use a DC compressor with additional injection of refrigerant to increase productivity in heating mode.

This technology allows you to effectively heat the space at -30 °C on the street, while electricity consumption is 6 times less than that of household electric heaters.

Thanks to DC-inverter technologies of the latest generation, the Electrolux HVI split system consumes a minimum of electricity and corresponds to the maximum class of seasonal energy efficiency level A+++ (SEER=8.5 / SCOP=6.1).

### HVI series

- Operating modes: cooling/heating/dehumidification/ventilation
- Stable work from -30 °C to +54 °C
- Remote control with real-time mode and backlight
- Anti-corrosion coating Blue Fin
- Multi-stage filter (6 filtration stages)
- Autonomous control and maintenance of plus temperature in the house (+8 °C)
- Increased track lengths
- I-Feel function
- Night mode

## DC-inverter split systems

Energy saving by 1.5 times

Electrolux inverter split systems are the most complete set of functions, energy-saving technologies of class A++ and a well-thought-out control interface.

The main advantage of the models is a high level of seasonal energy efficiency: SEER=6.3 class "A++".

Multifunctionality, effective safety technologies, long service life are just some of the additional advantages of DC-inverter split systems. Together with a unique modern design, they will be the ideal solution for creating a comfortable microclimate in your home

## Electrolux Super DC-inverter technologies

### High energy efficiency

Thanks to Super DC-Inverter technologies, Electrolux split systems achieve seasonal energy efficiency of SEER 7.0 (A++ Class). In standby mode, the energy consumption is only 0.5 W, which corresponds to the latest European standards.

### Heat exchange technologies

Thanks to the upgraded shape of the inner surface of the copper tubes, the heat transfer coefficient is increased and the load on the compressor is reduced. As a result, with the same size of heat exchangers, the energy efficiency of the device is increased by 5-6%.

### Silent operation

Due to the design features of the indoor unit, the device works extremely quietly (about 19 dB(A)).

### Blinds' position memory

Coolness in the direction you need every time after turning on the air conditioner.

### Anti frost mode

At low temperatures outside, the air conditioner in offline mode will maintain the temperature in the house + 8 °C, consuming a minimum of electricity.

### Self-diagnosis

A continuously operating self-diagnosis system automatically checks the current condition of the air conditioner, protecting it from external influences (more than 20 types of checks).

### 4D flow

Thanks to this function, you will be able to remotely change the direction of the airflow in 4 directions, which will allow you to create an ideal microclimate and comfort exactly where you are.

### I-Feel function

Thanks to the I-Feel function, the air conditioner maintains the required temperature at the location of the remote control.

### HAV series

- Operating modes: cooling/heating/dehumidification/ventilation
- Stable operation from -25 °C to +48 °C
- Wi-Fi control Option
- Remote control with real-time mode and backlight
- Anti-corrosion "Blue Fin" coating
- Multi-stage filter
- Autonomous control and maintenance of plus temperature in the house (+8 °C)
- Pre-heating of the tray of the outdoor unit
- Turbo mode
- Autorestart
- Hot start

## I-Feel function

Thanks to the I-Feel function, the air conditioner maintains the required temperature at the location of the remote control.

## Anti frost mode

At low temperatures outside, the air conditioner in offline mode will maintain the temperature in the house + 8 °C, consuming a minimum of electricity.

# Universal multi-component inverter split systems

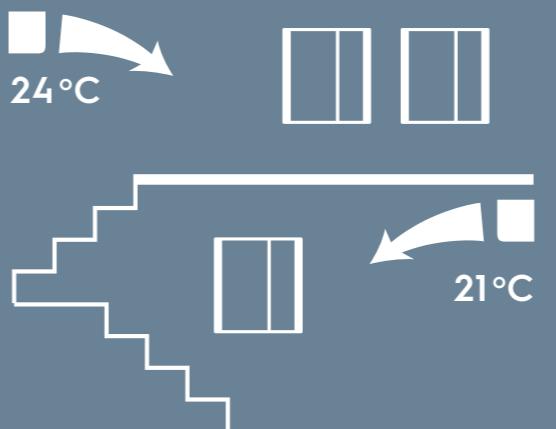

FMI inverter systems are designed for country houses, multi-room apartments, restaurants and small offices, where it is necessary to create an individual microclimate in each room. They have several indoor units and only one outdoor, so the installation of such systems will preserve the attractive appearance of any facade.

At the same time, the user is not limited when choosing equipment – it can be channel, cassette, floor-ceiling or wall-mounted indoor units in any combination with each other.

In total, there are more than 500 different combinations. Moreover, the system can be formed in stages, according to the principle of the designer: for example, install an outdoor unit, connect two indoor units to it, and connect the remaining three as needed.

## Universal multi-component inverter split systems

### Individual microclimate for everyone

The ability to independently adjust the operating parameters of each indoor unit separately allows you to create individual climatic conditions in different rooms.

### Wide operating temperature range

Electrolux multi split systems are capable of heating the premises at an outdoor temperature of -22 °C, and cooling at a temperature of +43 °C.

### Easy installation

The usage of new compressors made it possible to increase the total length of the tracks between the outdoor and indoor units to 145 m, and the height difference to 30 m, which significantly expanded the possibilities of choosing the installation location of the outdoor unit.

**High energy efficiency (SEER 6.1 and SCOP 4.0)**  
DC-inverter technology ensures the most accurate temperature maintenance in the room and reduces energy consumption to a minimum (by 40-50% compared to conventional air conditioner).

**Silent operation**  
Smooth operation of the compressor makes it possible to significantly reduce the noise level (up to 23 dB(A)), making the multi-split system indispensable in the bedroom or children's room.

**Automatic protection system**  
The built-in self-diagnosis system analyzes the main parameters of the air conditioner and, in case of failures, blocks its operation, notifying the user with an audible signal and an indicator on the display.

## Universal outdoor units

- Possibility to connect up to 4 indoor units
- Operating modes: cooling/heating/dehumidification/ventilation
- Stable operation from -22 °C to +43 °C
- Automatic defrosting
- Autorestart
- Anti-corrosion Blue Fin coating

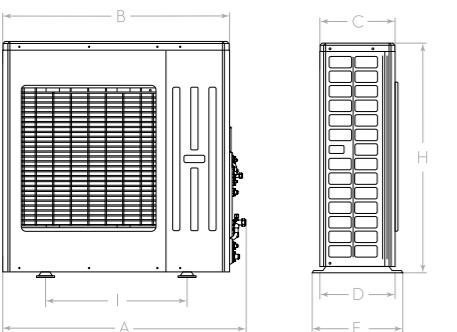

## Universal outdoor units

- Possibility to connect up to 5 indoor units
- Operating modes: cooling/heating/dehumidification/ventilation
- Stable operation from -22 °C to +43 °C
- Automatic defrosting
- Autorestart
- Anti-corrosion Golden Fin coating

## **Electrolux UP3 DC - the new generation of Full DC - inverter systems of professional air conditioning**

Electrolux household air conditioners based on inverter technologies have proven themselves well among various categories of consumers.

Many years of development experience and accumulated technological potential allowed to create and bring to market a series of professional air conditioning systems with DC-inverter compressor control.

**Reduced noise level**  
The noise level of the indoor unit is one of the most significant factors when choosing a split system. Electrolux products use fans of a special aerodynamic design that reduce the noise characteristics of the equipment to a minimum.

## Electrolux UP3 DC

### Full DC inverter

In the new generation of semi-industrial split systems, Full DC inverter technology is implemented, in which not only the compressor has inverter control, but also the fan motors of the indoor and outdoor units are inverter.

### Electronic expansion valve (EEV).

In the Electrolux semi-industrial split systems, instead of the usual capillary tube, throttling is carried out by an electronic expansion valve. This ensures a more accurate supply of refrigerant to the system and more accurate temperature maintenance.

### R32

The series of semi-industrial air conditioning systems UP3 DC uses a new generation refrigerant - R32, which is more than 35% safer for the environment than R410A.

**Extended range of operation**  
Built-in winter kit allows you to operate the system at temperatures from -20 ° C.

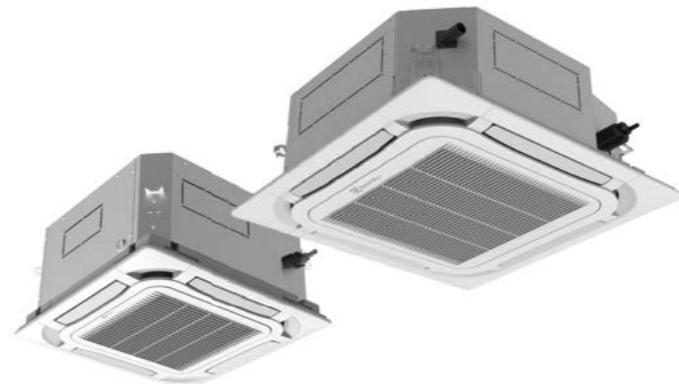

**A++**  
High energy efficiency class A++.

**The record**  
length of the pipe is up to 75 m.

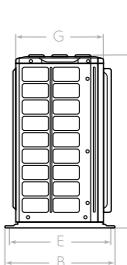

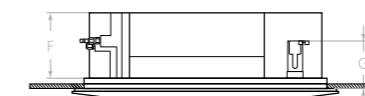

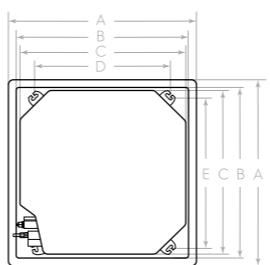

## Internal cassette-type blocks

- Operating modes: cooling/heating/dehumidification/ventilation
- Stable operation from -20 °C to +48 °C
- Display of the operating mode on the panel
- Night mode
- Automatic defrosting
- Auto-cleaning
- Hot start
- Possibility of fresh air mixing
- Wired remote control\*
- Remote control with real-time mode
- Anti-corrosion coating Blue Fin
- Reusable washable filters
